

TTM Receives Supplier of the Year Award from National Instruments

August 21, 2015 11:12 AM ET

for immediate release

Costa Mesa, CA - August 21, 2015 - TTM Technologies, Inc. (Nasdaq: TTMI), a leading global printed circuit board (PCB) manufacturer and custom electronic assembly provider, today announced that it received the 2015 Supplier of the Year award from National Instruments across all commodities for outstanding performance in quality, delivery and service over the last four consecutive quarters.

"On behalf of TTM Technologies and our entire team, we would like to thank National Instruments for this prestigious top award and recognition across our multiple facilities supporting their diverse needs globally, said Canice Chung President of TTM's Asia Pacific Business Unit. Steve Lach, Senior Vice President of TTM's Specialty Business Unit added, "This is a great recognition of the combined performances of the legacy TTM and legacy Viasystems operations. We are committed to our successful relationship with National Instruments and will continue our pursuit to provide the highest level of quality and service possible."

About TTM

TTM Technologies, Inc. is a major global printed circuit board manufacturer, focusing on quick-turn and technologically advanced PCBs, backplane assemblies and electro-mechanical solutions. TTM stands for time-to-market, representing how TTM's time-critical, one-stop manufacturing services enable customers to shorten the time required to develop new products and bring them to market. Additional information can be found at www.ttm.com.

About National Instruments

National Instruments Corp. designs, manufactures and sells systems to engineers and scientists that accelerate productivity, innovation and discovery. Its graphical system design approach to engineering provides an integrated software and hardware platform that speeds the development of systems needing measurement and control. The company provides flexible application software and modular, multifunction hardware that users combine with industry-standard computers, networks and third party devices to create measurement, automation and embedded systems. Its products are used by industries in a variety of applications, which include research and development, simulation and modeling, product design, prototype and validation, production testing, industrial control and field, factory services and repair. National Instruments was founded by Jeffrey L. Kodosky and James J. Truchard in May 1976 and is headquartered in Austin, TX
